## FLUSH AESTHETICS

## plan-design

Flowing transitions and flush aesthetics are characteristics of the Plan Design range by KARCHER DESIGN. On one level with the door, Plan Design fittings combine design with functionality.

A surface is described as plane when all points on this surface are in one layer. In this plane surface the Plan Design rose by KARCHER DESIGN sits flush. Most KARCHER DESIGN lever handles are available on flush roses.

DESIGN

# plan-design

The Plan Design range impresses with its minimalist aesthetics in modern design concepts. The 3 mm thin, round roses can be milled and mounted on the surface of the door. Video instructions and a precise milling template are available. Simply scan the QR code.

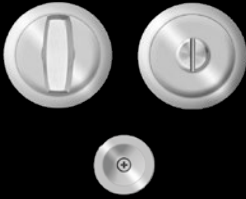

For square rosettes, surface-mounted installation without milling is recommended.

The door handle is unsprung and secured with a circlip. The lever sets are certified according to DIN EN 1906 GK 3 and therefore suitable for commercial and residential projects.

All components are made of stainless steel and convince with high quality and durability.

# plan-design

Excellent design quality on one level is the key feature of the 3 mm thin Plan Design rose by KARCHER DESIGN. The engineering of the rose is certified according to EN 1906 category of use 3 and can therefore be used in commercial and residential projects. Matching fire-resistant lever sets complete our Plan Design product range. Beside the flush installation of the rose it is also possible to mount the rose on the surface of the door. This is possible without adapting the rose and can be decided upon each individual project.
